

Perennial

Fabaceae (Pea Family)

Phenology: flowering March to May.

Management Responsibility: USFS (Coronado NF).

Similar Species: *Lupinus coccinus*, which has pink flowers, and a non-ciliate keel. *L. huachucanus* has extremely hairy leaves, ciliate keel, racemes surpassing foliage, and prostrate habit.

Notes: can be locally common, but populations are quite scattered. Very frost tolerant, often seen with ice crystals on leaflet hairs in early spring.

References: Kearney and Peebles, 1960. Martin et al, 1998.

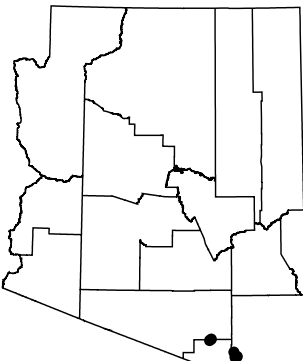

C. David Bertelsen

Lupinus huachucanus

Habitat: in pine forest on moderate to steep slopes, 5,000-6,000 ft (1524-1829 m) elevation.

C. David Bertelsen

Range: Chiricahua, Huachuca, and Santa Rita mountains; also found in Sonora and Chihuahua, Mexico.
